

There primary responsibilities of a UIView object

- Event handling
- - layout and subview management
- - drawing and animation
- 

How is a views bounds different from its frame

- A frame is used by the parent view to place it inside the parent view. Bounds is used by the view itself to place its own content like a scroll view scrolling

What is a view's frame

- The views size and its position to its relative superview because a views size is always specified by its frame, a view is always rectangular

What does documentation call the parent view thats embedding the other view

- Superview

What does documentation call a view that's embedded in another view

- Subview
-
